Katherm HK:  
on-demand heating  
and cooling from  
the floor, individually  
controlled.

A special design of Katherm HK trench system with energy-efficient EC tangential fans ensures quiet operation and energy-savings in the new ADAC headquarters in Munich. This design of trench system produces demand-led filtered, heated or cooled recirculating air from the floor.

Katherm HK and Katherm HK empty trenches are individually adapted to the curved external façade in this building.

---

## Katherm HK – decentralised room climate from the floor

Heaters positioned in front of windows are often unacceptable for aesthetic reasons in modern offices and other buildings with large glazed windows. At the same time, the needs of the users with regard to the climate in the space are also increasing.

The demand-led supply of filtered, heated or cooled recirculating air with Katherm HK units solves both problems at the same time, practically and invisibly from the floor. A higher level of efficiency is achieved with energy efficient EC tangential fans with noise-optimised commutation electronics, resulting in energy savings of up to 60% compared with conventional fans!

Flow-optimised barrel impellers ensure quiet operation and guarantee that air flows through the coil along its entire length.

### **Katherm HK E – with additional directly selectable electric heating function**

Electric heating is possible in addition to water-based heating and cooling with the 2-pipe Katherm HK E version with an integrated continuously variably controlled electric heating element. Compared to a purely water-based system, the user of the room has the option of individual heating independently of the available water temperature. The use of the Katherm HK E means that there is less frequently a need for a switch-over between heating and cooling in transitional heating phases compared to a purely water-based 4-pipe system. This saves energy and enables the user to flexibly create their ideal climate.

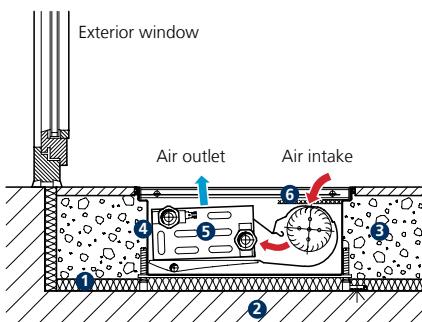

### **KaControl**

Katherm HK are available ex-works with integral KaControl. The KaController room control unit enables up to six units in a group to be operated autonomously. The units can be integrated into higher-level automation systems, such as KNX or Modbus, via optional interfaces. There is also a control option with a 0-10 V fan control if complete control is to be provided on site.

## Installation examples and arrangement of the air outlet

### Example of a cooling unit

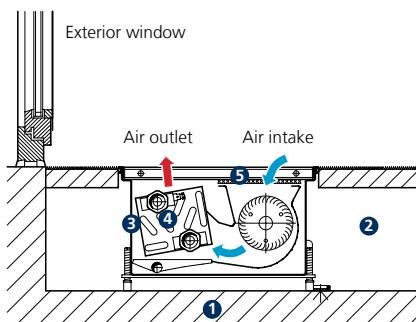

(Installation in screed, Katherm HK 320, trench height 130 mm)

- ① Heat and sound insulation
- ② Concrete floor
- ③ Screed
- ④ Floor trench
- ⑤ High-output convector
- ⑥ Filter (optional)

### Example of a heating unit

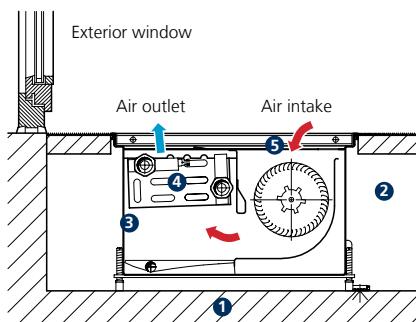

(Installation in a raised floor, Katherm HK 290, trench height 160 mm)

- ① Concrete floor
- ② Raised floor
- ③ Floor trench
- ④ High-output convector
- ⑤ Filter (optional)

### Example of a cooling unit

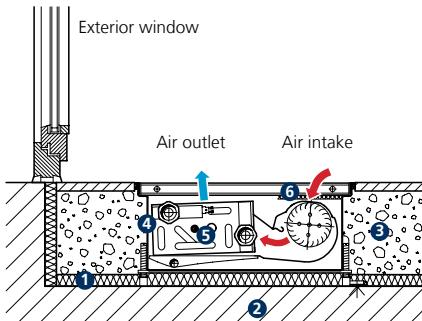

(Installation in a raised floor, Katherm HK 360, trench height 210 mm)

- ① Concrete floor
- ② Raised floor
- ③ Floor trench
- ④ High-output convector
- ⑤ Filter (optional)

### Example of a heating unit

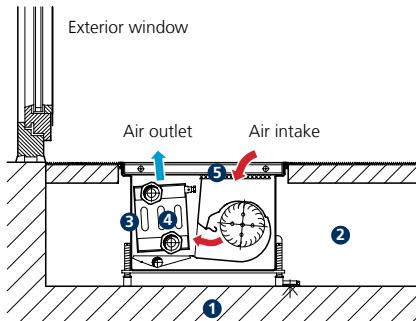

(Installation in screed, Katherm HKE 320 E, trench height 130 mm)

- ① Heat and sound insulation
- ② Concrete floor
- ③ Screed
- ④ Floor trench
- ⑤ High-output convector
- ⑥ Filter (optional)

### Example of a cooling unit

(Installation in a raised floor, Katherm HK 245, trench height 160 mm)

- ① Concrete floor
- ② Raised floor
- ③ Floor trench
- ④ High-output convector
- ⑤ Filter (optional)

## Product benefits

- ▶ Hygiene conforms to VDI 6022: simple cleaning
- ▶ Heat outputs tested independently in accordance with DIN EN 16430
- ▶ EC fan - efficient in terms of noise and energy
- ▶ Low-cost effective heating and cooling with low noise levels
- ▶ Matching frame for every roll-up grille for a perfect overall look
- ▶ Eurokonus valve connection for fast installation

## Features

- ▶ Energy-saving EC tangential fan with flow-optimised impellers
- ▶ Condensate tray can be removed to the room side for complete cleaning
- ▶ Sound-decoupled fixing of the tangential fan, easy removal without tools
- ▶ Connection and control box for fast and safe electrical connection
- ▶ Condensate pump mounting kit, supplied separately or factory-fitted
- ▶ Extensive range of control accessories
- ▶ Roll-up and linear grilles with colour-coordinated spacers

## Performance data

<b>Heat output [W]<sup>1)</sup></b>	▶ 436 – 16884
<b>Cooling output [W]<sup>2)</sup></b>	▶ 62 – 3348
<b>Sound pressure level [dB(A)]<sup>3)</sup></b>	▶ 20 – 53
<b>Sound power level [dB(A)]</b>	▶ 28 – 61

<sup>1)</sup> at LPHW 75/65 °C,  $t_{L1} = 20$  °C

<sup>2)</sup> at CHW 16/18,  $t_{L1} = 27$  °C, 48% relative humidity

<sup>3)</sup> The sound pressure levels were calculated with an assumed room insulation of 8 dB(A). This corresponds to a distance of 2 m, a room volume of 100 m<sup>3</sup> and a reverberation time of 0.5 s (in accordance with VDI 2081)

## Operating limits

- ▶ Max. operating pressure: 10 bar
- ▶ Max. entering water temperature: 95 °C
- ▶ Min. entering water temperature: 5 °C
- ▶ Inlet air temperature: 40 °C
- ▶ Max. glycol volume: 50 %

## Applications

Buildings of all kinds, in which there is a high cooling load due to internal loads and the effects of sunlight. Experience has shown that Katherm HK can provide low-cost, effective cooling with low, non-disruptive sound levels.

## 02 ➤ Technical data

# Advice on measuring conditions

## Heat and cooling outputs

The heat and cooling outputs were measured in accordance with DIN EN 16430 "Fan-assisted heaters, convectors and trench convectors".

Part 1 "Technical specifications and requirements"

Part 2 "Test method and evaluation of the heat output"

Part 3 "Test method and evaluation of the cooling output"

The standard regulates the performance measurements specifically of trench convectors under normal operating conditions based on DIN EN 442 "Radiators and Convector".

Part 1 "Technical specification and requirements"

Part 2 "Test method and performance data"

The specific requirements for cooling mode are taken into account in DIN EN 16430 Part 3. The reference air temperature is measured in the centre of the test chamber (2 metres from the external wall) at a height of 0.75 metres. This reference air temperature is not to be confused with the air inlet temperature. This may differ significantly between the unavoidable short circuit between the air outlet and air intake.

The heat loads are introduced into the test cabin by 10 output-controlled dummies (see photo) so that they cannot or can only reproducibly influence the outputs and functions.

Katherm HK have been developed and built to be short circuit-optimised. The probability of a short circuit is minimised as far as is technically possible.

## Katherm HK E, safety functions and heat outputs

The safety functions and the heat outputs have been measured under consideration of the following standards:

- ▶ DIN EN 60335 Safety of electrical appliances for domestic use and similar purposes
- ▶ Part 1 (VDE 0700-1): General requirements
- ▶ Part 2-30 (VDE 0700-30): Particular requirements for room heaters
- ▶ Part 2-40 (VDE 0700-40): Particular requirements for electrical heat pumps, air conditioners and dehumidifiers

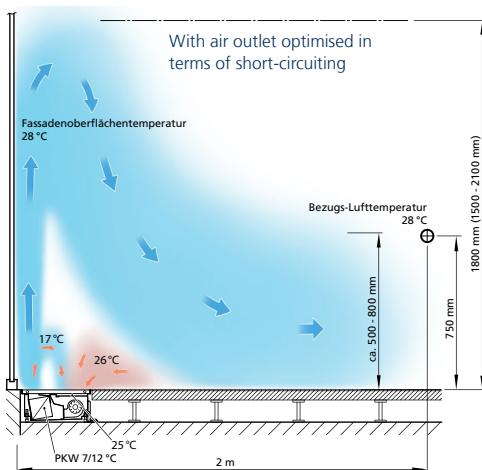

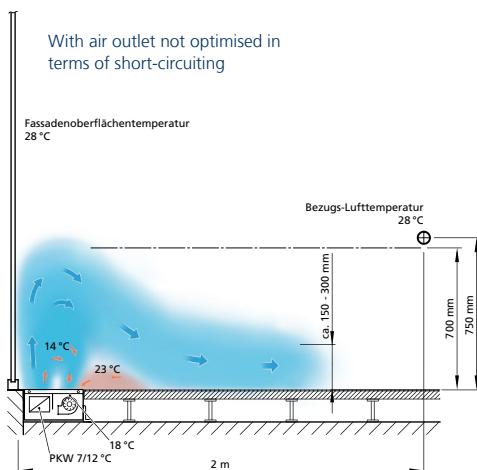

## Acoustics

Katherm HK are very often used in acoustically sensitive areas. Accordingly, Katherm HK have been optimised in terms of noise levels. The sound power level is measured in accordance with DIN EN ISO 3744. (Determination of the sound power and sound energy levels of sources of sound from sound pressure measurements – precision 2 class of enveloping measurement surface for an essentially free sound field over a reflective plane) in a semi-low reflective acoustic measuring chamber.

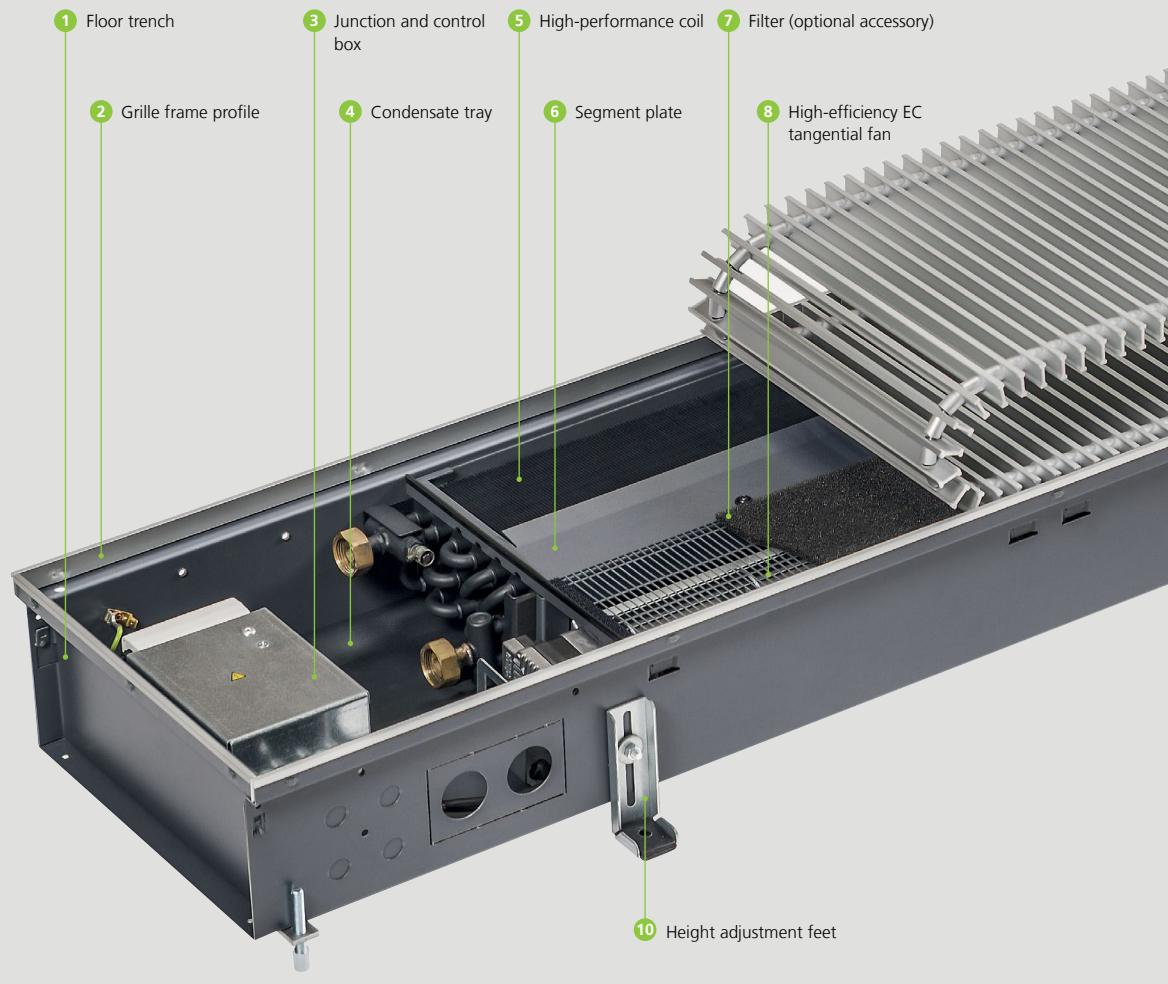

Heat and cooling output test cabin

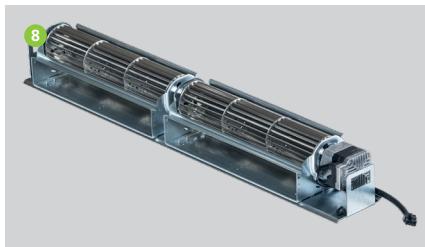

## Comparison of air flow profiles

## Katherm HK at a glance

### Features

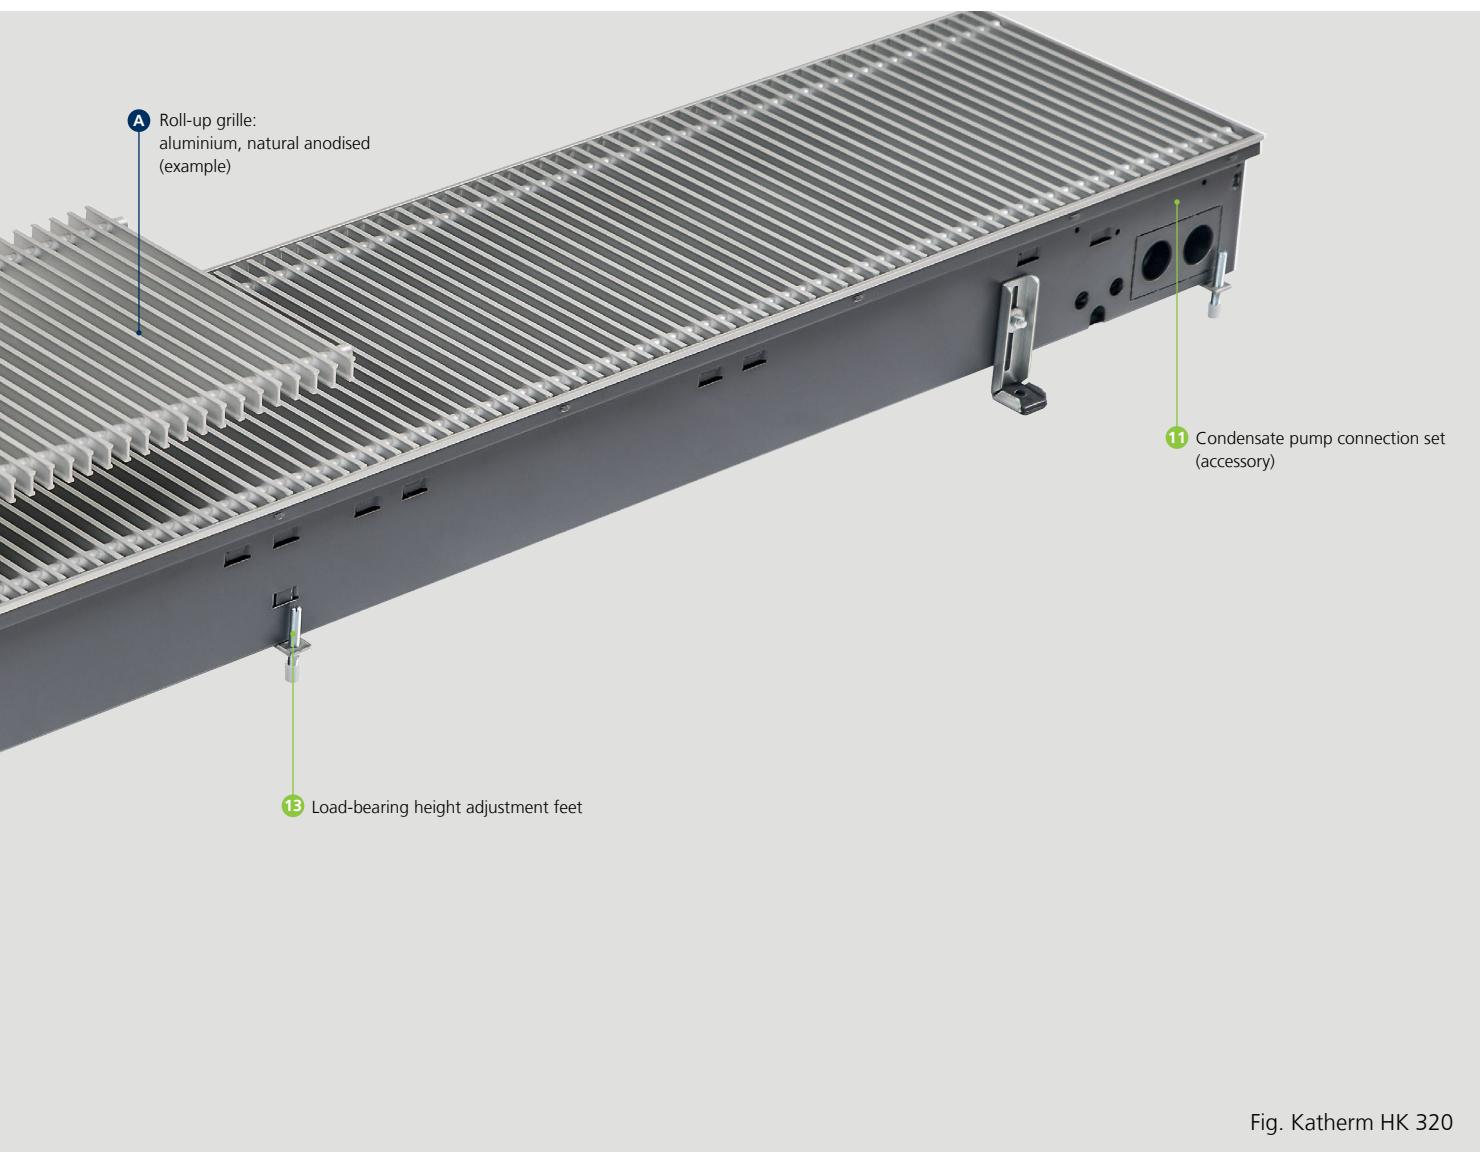

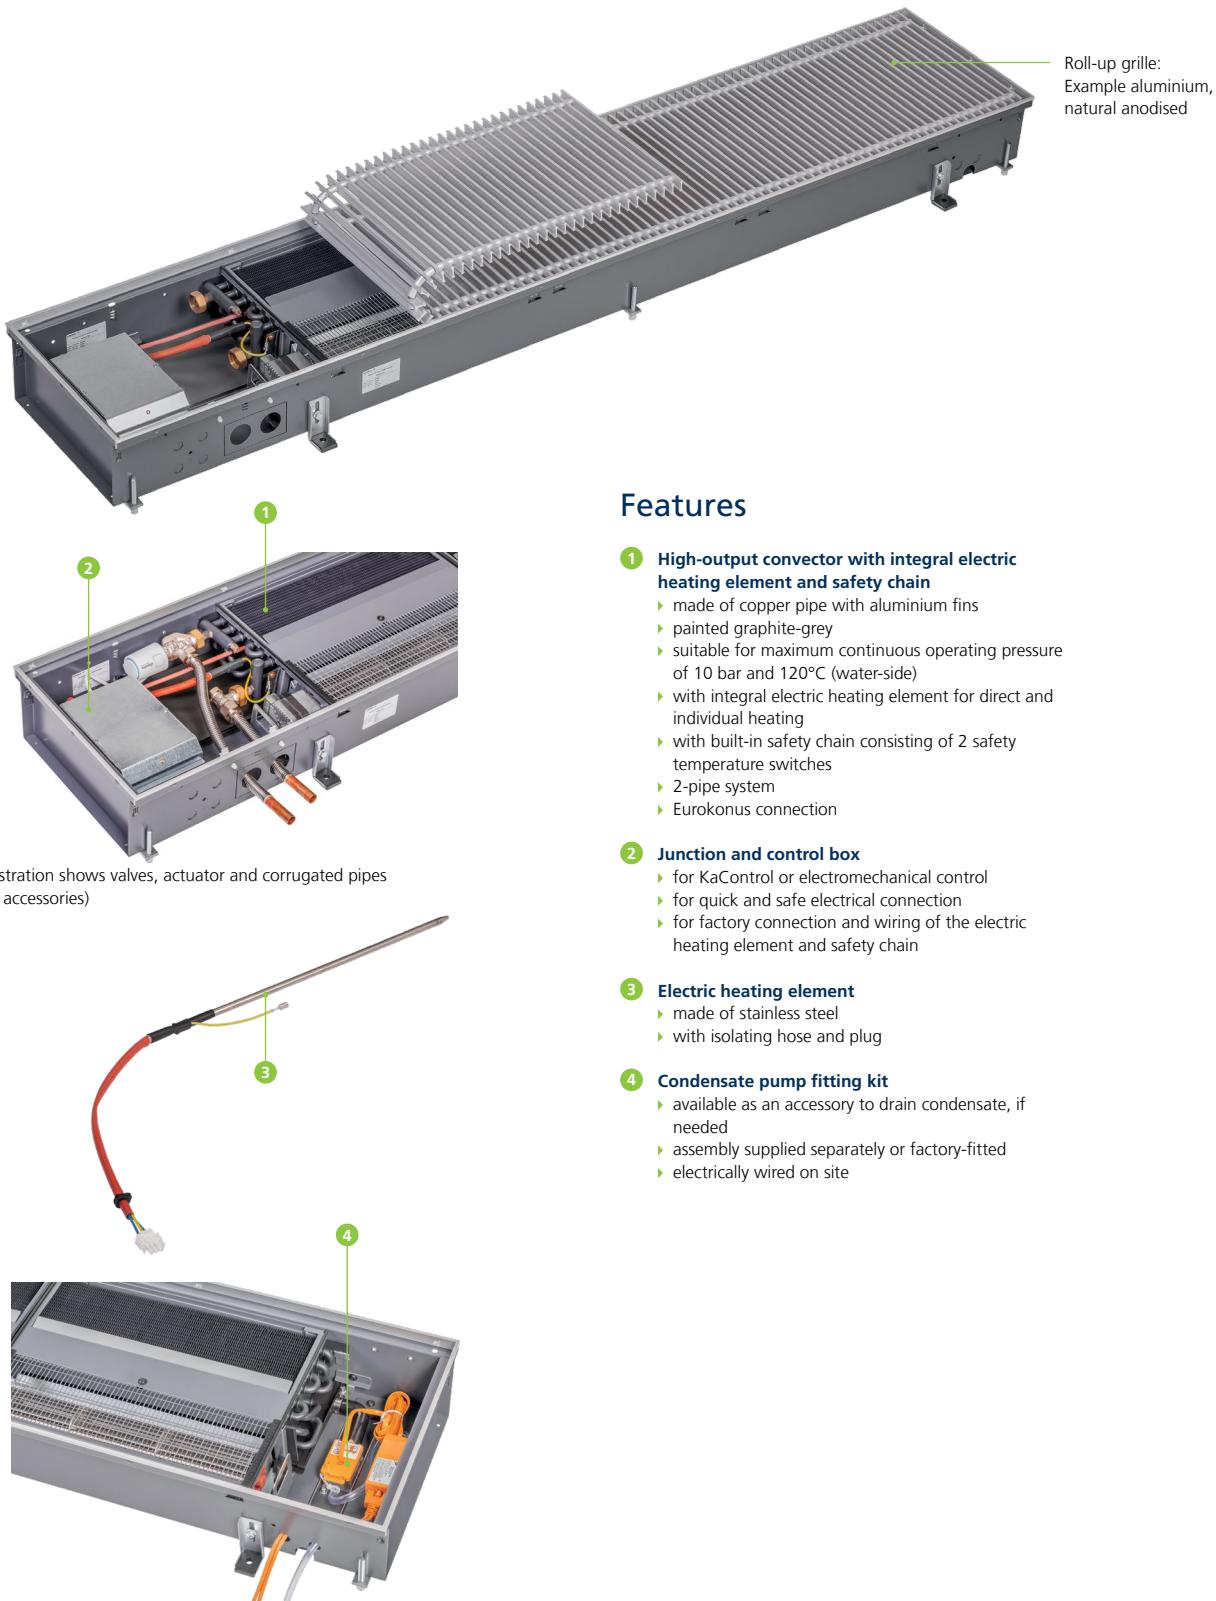

Fig. Katherm HK 320

- 1 Floor trench:**
  - galvanised sheet steel
  - painted graphite grey on both sides
- 2 Grille frame profile:**
  - to match double T-profile grille
  - with protective lip on 3 sides
- 3 Junction and control box:**
  - for fast and safe electrical connection, saves installation time
  - with KaControl or electromechanical control
- 4 Condensate tray:**
  - for the safe discharge of the condensate and simultaneous air guidance
  - specifically designed for ease of cleaning in line with the Hygiene Directive VDI 6022
  - can be removed to the room side for ease of cleaning
- 5 High-performance coil:**
  - made of copper pipes with aluminium fins
  - painted graphite-grey
  - suitable for maximum continuous operating pressure of 10 bar and 120°C
  - Eurokonus connection
  - for 2-pipe and 4-pipe system
- 6 Segment plate:**
  - acts as a finger guard for the tangential fan, filter frame, airflow baffle, grille seat and reinforcing braces to strengthen the trench
- 7 Filter:**
  - optional accessory
- 8 High-efficiency EC tangential fan:**
  - energy-saving, with flow-optimised impellers, cascaded arrangement as a continuous fan belt (HK 320)
  - produces a uniform air flow through the coil
  - robust and quiet motor design
  - continuously variable speed control via an external 0-10 V signal
  - motor monitoring with internal fault processing
- 9 Cover plate:**
  - visual protection and to protect against dirt
  - for connecting/return end and intermediate sections
- 10 Height adjustment feet:**
  - for the secure mounting of the trench
  - with sound insulation
  - as standard
- A Aluminium, natural anodised roll-up grille (example):**
  - grille bar dimensions 18 x 5 mm
  - connections made of corrosion-proof steel springs with spacers in a matching colour
  - free cross-section approx. 70%
- 11 Condensate pump fitting kit:**
  - available as an accessory to drain condensate, if needed
  - supplied separately or factory-fitted
  - electrically wired on site
- 12 Tangential fan fixing:**
  - ease of removal of the tangential fan without a tool
  - innovative combined coupling/ball joint system
  - simultaneous acoustic decoupling
- 13 Load-bearing height adjustment feet:**
  - for height adjustment and support of the trench

# Katherm HK E

Katherm HK E units are designed as 2-pipe units. The use of these trench coils means that there is no need for the complete routing of pipes for a 4-pipe system in the floor and riser including all fittings and valves. This

results in considerable savings during installation and in terms of material consumption, which, in turn, delivers cost savings.

## Katherm HK with optional supply air function

Fig. Katherm HK with supply air modules

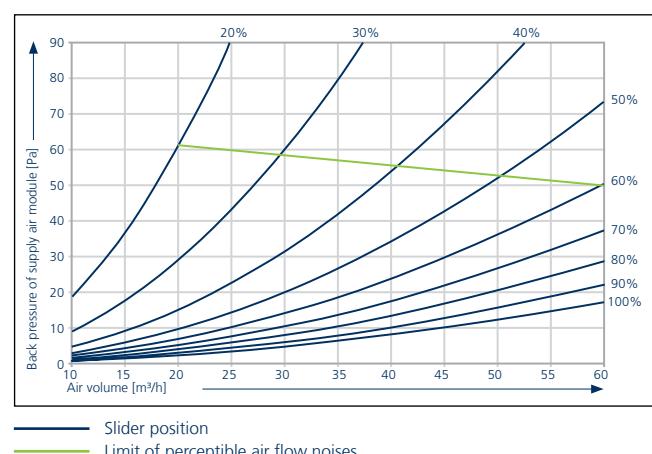

Katherm HK units with supply air function are perfectly suited to supply primary air (fresh air) into a space, perfectly combining heating, cooling and a supply of fresh air. There are two versions available: primary air intake via supply air modules or through supply air trenches.

### Function of supply air with supply air modules

The conditioned primary air enters through a variable number of supply air modules below the trench heater. It escapes through an outlet slot arranged along the length of the trench heater and mixes with the secondary air heated or cooled by the coil before emerging into the room. Optimum shielding can be provided in front of the glazing with a slow and low-turbulence leaving air velocity. The volume of air supplied can be conveniently adjusted via the variable number of supply air modules per trench and the continuously adjustable slider. Up to 60 m<sup>3</sup>/h of primary air can be supplied per supply air module. High volumetric flow combined with low slider position can lead to noticeable air flow noises (see adjacent diagram).

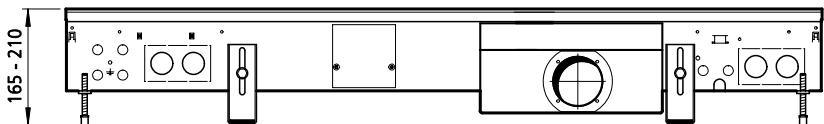

The designs of Katherm HK with supply air can be adapted on a project-by-project basis. The trench widths are then +20 mm larger in relation to the standard widths of the Katherm HK versions. The trench heights increase by +35 mm (HK 320) or +20 mm (HK 290 and HK 360). More information on request.

### Slider positions<sup>1)</sup>

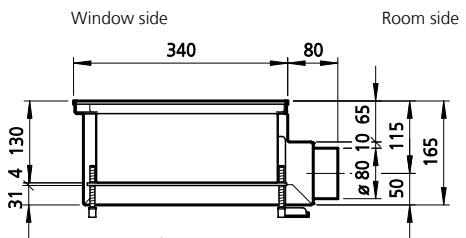

<sup>1)</sup> The slider position corresponds to the percentage of the open cross-sectional area of the supply air inlet.

## Katherm HK – supply air trenches ZL

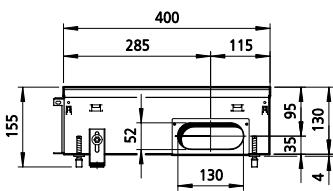

The Katherm supply air trench ZL is available for all trench heaters (Katherm range). This represents a 400 mm long trench, which can be fitted to all designs of Katherm units. Conditioned supply air can also be fed into rooms through the Katherm supply air trench ZL. This is achieved with different sizes/designs of spigots for the most diverse trench dimensions. It is possible to regulate the air volume flow by means of slider elements built into in the supply air trenches.

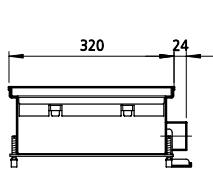

### Benefits:

- ▶ available for trench widths and heights as per the table in the Katherm range
- ▶ supply air feed through the Katherm floor trench
- ▶ low leaving air speeds, hence pleasant levels of comfort
- ▶ low sound development when correctly designed
- ▶ low investment and maintenance costs
- ▶ supply air outlets visually identical to Katherm trench heaters
- ▶ no wear parts / no electrically rotating parts

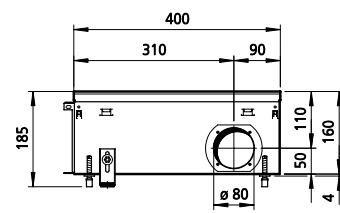

Trench width	Trench length	Trench height	Supply air spigot	Max. air volume flow (noiseless)

## Comfort

Comfort also plays a key role in air conditioning. We'll help you to consider this aspect when designing a project using Kampmann trench heaters, at the same time as complying with the current guidelines in DIN EN 15251 (in future DIN EN 16798 Parts 1 and 2) and DIN EN ISO 7730. Essentially the following recommended values can be assumed:

### For heating:

**Supply air outlet temperature:** 20–26 °C (but not lower than the room temperature)  
 Outlet velocity: < 1.5 m/s  
 Distance of the supply air trench to the occupied zone: > 0.5 m

### For cooling:

**Supply air outlet temperature:** <4 K below room temperature  
 Outlet velocity: < 1.2 m/s  
 Distance of the supply air trench to the occupied zone: > 1 m

### Other parameters

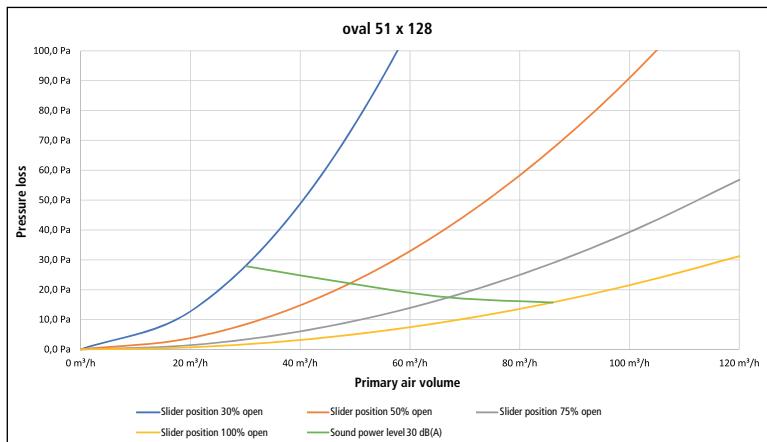

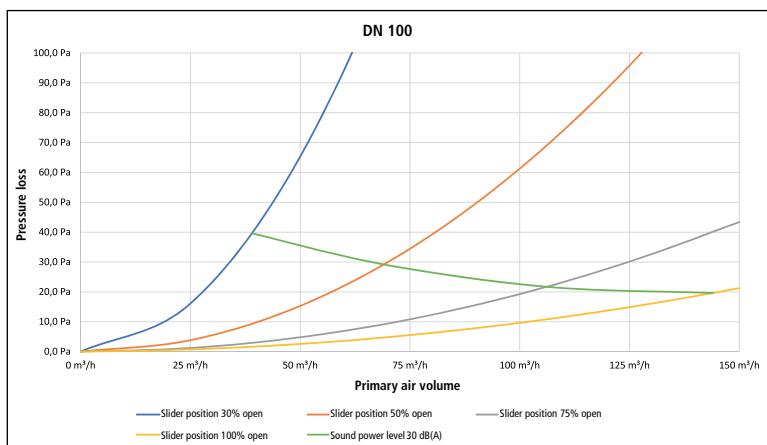

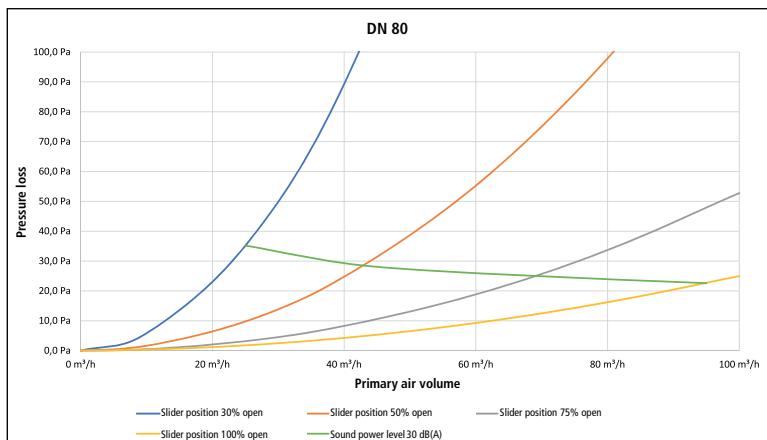

In individual cases, additional parameters, such as room and supply air humidity, as well as leaving air velocity, need to be taken into consideration.  
 (See DIN EN ISO 7730)

### Additional information

The supply air trenches Katherm ZL can be used for cooling, heating or isothermal air exchange using preconditioned primary air. A spigot or connection at the front end is also possible with appropriate trench dimensions and sufficient space in the air outlet area (check on request!).

The upper limit of the air volume flow in the spigot is calculated from the maximum air speed and cross-section of the spigot. This speed should not exceed 3.0 m/s to avoid additional sound emissions. The resulting air-side pressure losses vary according to the air volume flow as per the diagram.

<sup>1)</sup> Versions with roll-up grille, Katherm HK with linear grille are available on request!

<sup>2)</sup> Add an additional power consumption of 1 W per thermoelectric actuator, art. no. 194000146906.

<sup>3)</sup> Values rounded up within the measurement tolerances.

<sup>4)</sup> The sound pressure levels were calculated with an assumed room insulation of 8 dB(A). This corresponds to a distance of 2 m, a room volume of 100 m<sup>3</sup> and a reverberation time of 0.5 s (in accordance with VDI 2081) Sound pressure level < 20 dB (A) and sound power level < 28 dB (A) outside the usual measuring and audible range.

Use our calculation tools on our website to easily calculate heat outputs and other technical data with just a few clicks!

► <https://www.kampmann.co.uk/hvac/products/trench-technology/katherm-hk>

<sup>1)</sup> Versions with roll-up grille, Katherm HK with linear grille are available on request!

<sup>2)</sup> Add an additional power consumption of 1 W per thermoelectric actuator, art. no. 194000146906.

<sup>3)</sup> Values rounded up within the measurement tolerances.

<sup>4)</sup> The sound pressure levels were calculated with an assumed room insulation of 8 dB(A). This corresponds to a distance of 2 m, a room volume of 100 m<sup>3</sup> and a reverberation time of 0.5 s (in accordance with VDI 2081) Sound pressure level < 20 dB (A) and sound power level < 28 dB (A) outside the usual measuring and audible range.

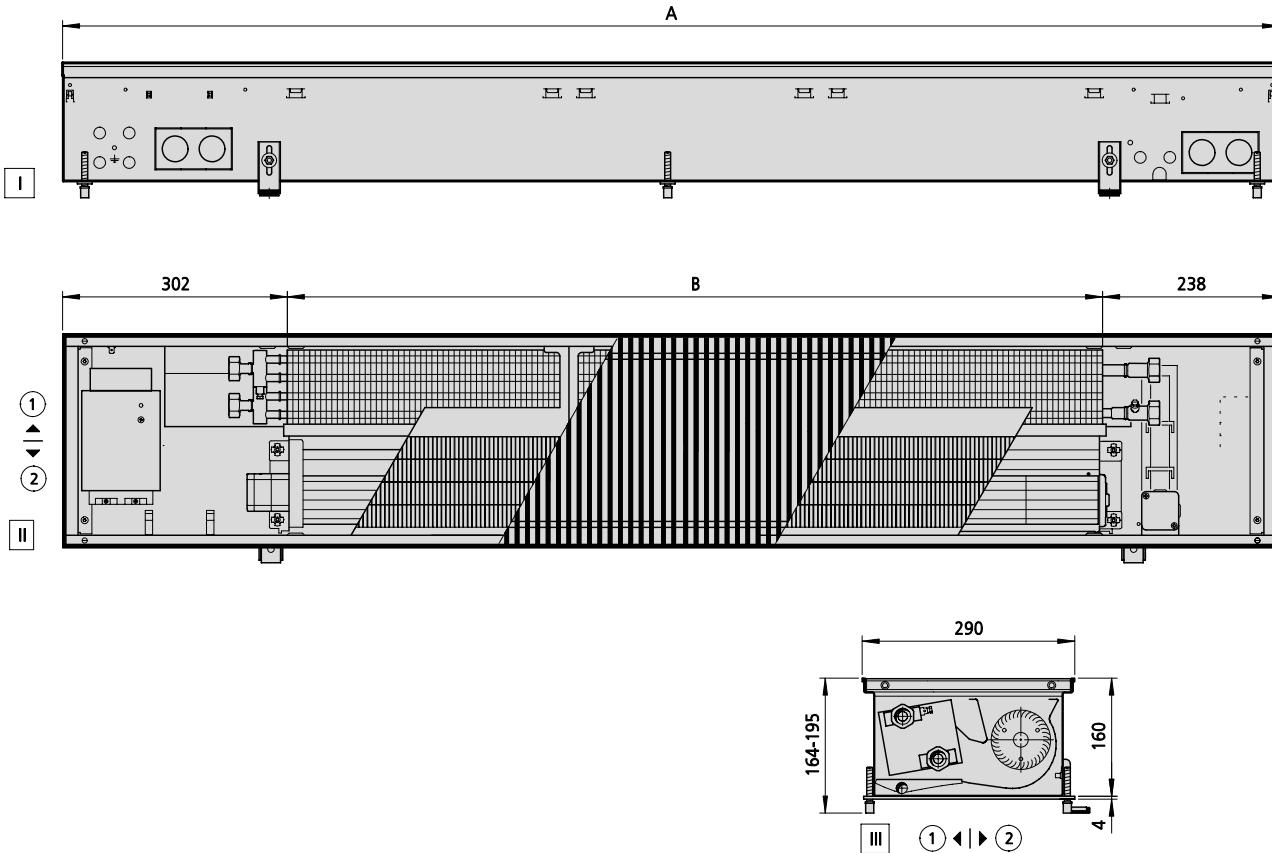

# Katherm HK

<sup>1)</sup> Versions with roll-up grille, Katherm HK with linear grille are available on request!

<sup>2)</sup> Add an additional power consumption of 1 W per thermoelectric actuator, art. no. 194000146906.

<sup>3)</sup> Values rounded up within the measurement tolerances.

<sup>4)</sup> The sound pressure levels were calculated with an assumed room insulation of 8 dB(A). This corresponds to a distance of 2 m, a room volume of 100 m<sup>3</sup> and a reverberation time of 0.5 s (in accordance with VDI 2081) Sound pressure level < 20 dB (A) and sound power level < 28 dB (A) outside the usual measuring and audible range.

Use our calculation tools on our website to easily calculate heat outputs and other technical data with just a few clicks!

► <https://www.kampmann.co.uk/hvac/products/trench-technology/katherm-hk>

<sup>1)</sup> Versions with roll-up grille, Katherm HK with linear grille are available on request!

<sup>2)</sup> Add an additional power consumption of 1 W per thermoelectric actuator, art. no. 194000146906.

<sup>3)</sup> Values rounded up within the measurement tolerances.

<sup>4)</sup> The sound pressure levels were calculated with an assumed room insulation of 8 dB(A). This corresponds to a distance of 2 m, a room volume of 100 m<sup>3</sup> and a reverberation time of 0.5 s (in accordance with VDI 2081) Sound pressure level < 20 dB (A) and sound power level < 28 dB (A) outside the usual measuring and audible range.

## 03 ▶ Design information

# Information on planning and design

Katherm HK are suitable for use in all kinds of buildings in which there is a cooling load owing to internal loads and the effects of sunlight.

They are generally positioned directly in front of the external façade without a large gap. Katherm HK can provide cost-effective and efficient cooling, particularly in front of large areas of glazing.

## Air outlet

Katherm HK are positioned with the coil on the façade side. If it is arranged on the room side, the high air output would result in lower levels of comfort in the occupied zone.

## Acoustics

When designing a system, it should be noted that disruptive noise may occur at higher fan speeds. The respective sound power levels of Katherm HK are indicated in the tables (see "Technical data"). The sound pressure levels were calculated with an assumed room insulation of 8 dB(A). This corresponds to a distance of 2 m, a room volume of 100 m<sup>3</sup> and a reverberation time of 0.5 s (in accordance with VDI 2081).

As the sound level is not only due to the Katherm HK, but is also influenced by the number of Katherm HK and also very significantly by the acoustic characteristics of the room, the actual figure may vary in practice. We would recommend designing Katherm HK taking into account the respective permitted sound pressure level in the room.

Make use of our online calculation programs to calculate your heat outputs, cooling outputs and flow rates simply and easily with a couple of clicks!

► [kampmann.co.uk/katherm-hk/calculation](http://kampmann.co.uk/katherm-hk/calculation)

## Heat and cooling outputs

The heat and cooling outputs were calculated based on DIN EN 16430. We would recommend using our online calculation programs to convert to other operating conditions at:  
[kampmann.de/katherm-hk/calculation](http://kampmann.de/katherm-hk/calculation).

## Katherm HK E

### Heat outputs

The heat output characteristic curve to determine the control voltage was measured taking into consideration DIN EN 60335, Part 1, Part 2 - 30 and Part 2 - 40.

## Comfort

Comfort was calculated taking into consideration DIN EN ISO 7730 (May 2006) "Ergonomics of the thermal environment – analytical determination and interpretation of thermal comfort by calculation of the PMV and the PDB indexes and criteria of local thermal comfort" (ISO 7730:2004).

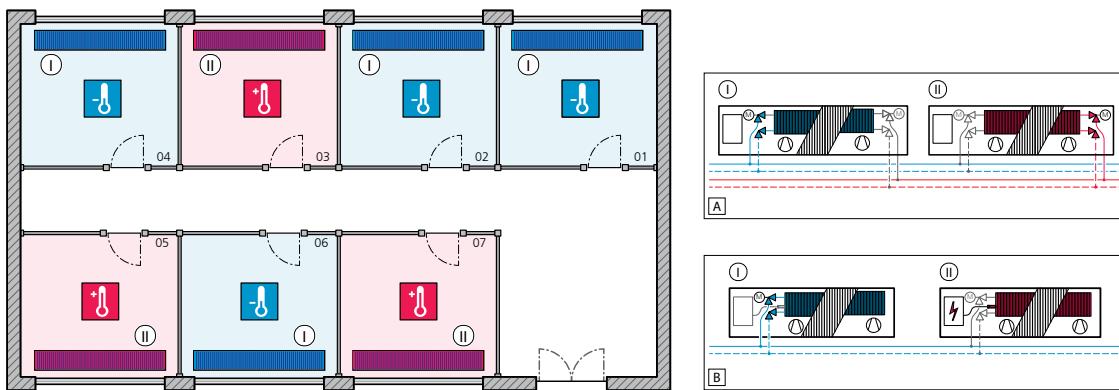

The air outlet and air flows have been optimised in detail in accordance with this standard.

## Planning of Katherm HK E for optional heating in electric mode

### Optional electric heating function

Electric heating is possible in addition to water-based heating and cooling with the 2-pipe Katherm HK E version with an integrated continuously variably

controlled electric heating element. This means that the heat requirement of a room can be met either by the coil and also directly by the electric heating element.

Example: Floor of an office building with multiple single offices

A 4-pipe operation with a coil (CHW cooling/LPHW heating)

B 2-pipe operation of the HK E with a coil (CHW cooling) and heating by the electric element

I Cooling

II Heating

### Katherm HK E 2-pipe system as a comfort solution

In normal 2-pipe operation, rooms are either cooled (CHW cooling) or heated (LPHW heating) via the coil. The system needs to be centrally switched over to change from cooling to heating mode. The Katherm HK E with electric heating element offers a 2-pipe solution with the comfort and convenience of a 4-pipe system. The decisive benefit are as follows:

- ▶ Individual determination of the room climate by the user of the room. The electric heating element can be used for heating, regardless of the other offices, although the other offices might still be in cooling mode. The Katherm HK E takes over a 4-pipe function.
- ▶ Flexible room design becomes possible.
- ▶ The electric heating element can be used to provide full heating, depending on the heat requirement. In the event of a higher heat requirement, for instance with cold outside temperatures in winter, the heat requirement can be met by the coil in water-based heating mode.

### Sustainable 4-pipe system solution at the cost of a 2-pipe system

The use of Katherm HK E offers the following benefits compared to a traditional 4-pipe system, which also have an impact on the sustainability rating of a building:

- ▶ Saving in terms of pipework for a 4-pipe system within the floors and risers, including distribution pipes, connection piping, fittings and valves.
- ▶ Significant raw material savings and lower material costs.
- ▶ Reduced CO<sub>2</sub> emissions along the value chain.
- ▶ Considerably shorter installation time and lower commission costs.
- ▶ Positive carbon footprint by the use of green electricity from renewable energy sources.

## HK-E control functions

### A. How does the control work?

The electric heating element and the EC tangential fan can be continuously variably controlled in the electric heating-power output. Heating or cooling operating mode is defined externally in the system setting via a potential-free contact. In cooling mode, chilled water is fed to the system and the room user has the option of individually cooling with chilled water (**CHW cooling**) or heating with the electric heating element (**electric heating**) depending on the day and the temperature. When the system is set to heating mode, LPHW is fed to the system – in this case, heating can only be provided by the coil (**LPHW heating**).

The following control concepts are available for the control of the Katherm HK E.

#### a. Electromechanical version (-00):

The control responds to on-site signals or Kampmann room thermostats. The switch-over between cooling/heating mode must be done by a contact on site. A potential-free collective fault signal is optionally available.

#### b. KaControl version (-C1):

The control is provided by the Kampmann KaControl system. Every unit is equipped with its own intelligence. The switch-over between cooling/heating mode must be done by a contact on site.

### B. Switch-over between operating modes

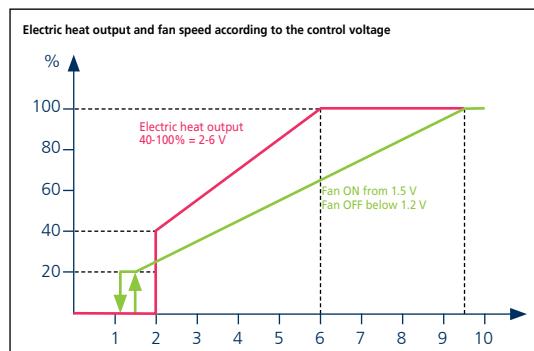

The operating modes of the Katherm HK E can be switched via an external potential-free contact. When the contact is open, **LPHW heating** operating mode is specified. When the contact is closed, cooling is possible in **CHW cooling** operating mode or heating in **Electric heating** operating mode.

### C. Electric heating operating mode

The fan starts up at the minimum fan speed at a control voltage of approx. 1.5 V. The electric heating element is switched on from approx. 2 V. This can regulate the heat output between 40% and 100% within a range of 2 V to 6 V. It means that the full heat output is reached at the design point at a low sound power level.

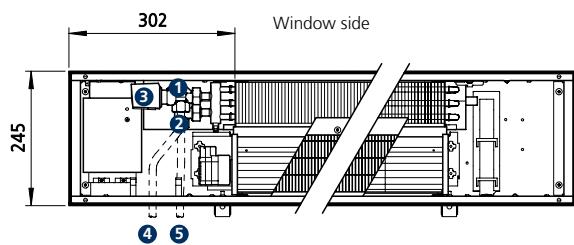

### D. Safety shut-off device

Every Katherm HK E is fitted with a safety shut-off device. If the temperature of the grille surface rises impermissibly high if the unit is used incorrectly, for instance by covering the trench, the heat output is automatically reduced. If the temperature cannot be reduced, then the safety temperature limiter shuts down the unit. The fact that the safety temperature limiter has triggered and other fault messages can be reported via a potential-free alarm contact.

# 04 ► Controls

## 24V electromechanical version

Version for complete on-site control of the Katherm HK (not for Katherm HK 360) or via convenient clock thermostats.

### Product features

- ▶ The operating voltage must be provided by a central on-site 24 V DC power supply.
- ▶ The external power supply ensures space-saving connections in the floor trench so that the hydraulic connection can be conveniently performed.
- ▶ In the event of a motor malfunction, e.g. overloading, the fault alarm is internally evaluated and the fan is automatically disabled.

### Electromechanical control type 30456

Flush-mounted clock thermostat with 10-stage fan speed setting including day and week programme

### Product features:

- ▶ large illuminated display with four sensor keys
- ▶ can be integrated into any 50 x 50 switch program
- ▶ can be integrated using an intermediate frame into a 55 x 55 switch program
- ▶ white cover panel and frame (similar to RAL 9010)
- ▶ integral room temperature sensor
- ▶ room/frost protection function (temperature measurement within the clock thermostats).
- ▶ integrated day or weekly program timer programs with automatic summer/winter changeover
- ▶ 24 V operating and output voltage (0-10 V fan control)
- ▶ for use with Katherm HK and HK E, max. 5 units

## Information on cable laying

Note the following points with the cabling and wiring diagrams for the electrical installation:

- ▶ Comply with the details on the type of cable and cabling, taking into consideration VDE 0100.
- ▶ Without \*: NYM-J. The requisite number of wires, including PE conductor, is stated on the cable. Cross-sections are not stated, as the cable length is involved in the calculation of the cross-section.
- ▶ With \*: J-Y(ST)Y 0.8 mm. Lay separately from high voltage lines.
- ▶ If other types of cables are used, they must be at least equivalent.

- ▶ The terminals on the unit are suitable for a maximum wire cross-section of 2.5 mm<sup>2</sup>.
- ▶ We recommend type F when using RCCBs. Refer to the provisions of DIN VDE 0100 Parts 400 and 500 when designing the rated fault current.
- ▶ The electrical data listed in the following table needs to be considered when configuring the mains supply and fuses on site.

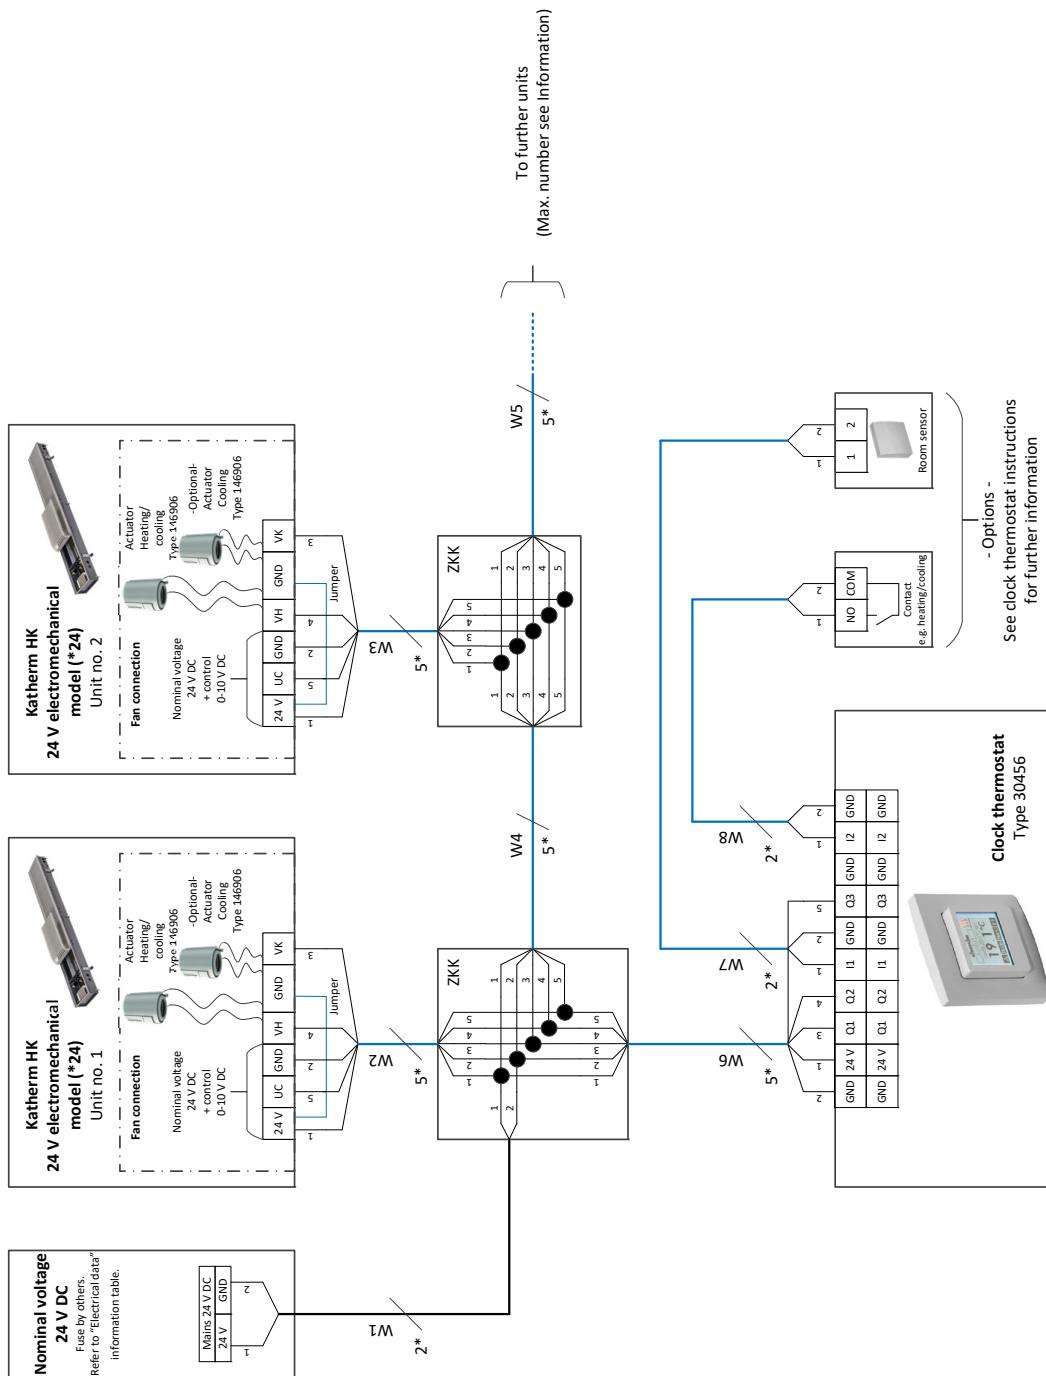

### Electrical data for the Katherm HK 320/130, 245/160, 24 V electromechanical version (\*24)

## Katherm HK, 24 V electromechanical, 2- or 4-pipe, valve actuator(s) 24 V AC/DC Open/Closed, actuation by clock thermostat type 30456

## Katherm HK, 24 V electromechanical, 2- or 4-pipe, valve actuator(s) 24 V AC/DC Open/Closed, actuation by BMS

# Control of Katherm HK electromechanical version (\*00)

## Product features

In the electromechanical version (\*00), the Katherm HK has an integrated power supply unit 230 V AC/24 V DC. The factory-fitted fan is wired to a terminal. The appropriate terminals are available for valve actuators.

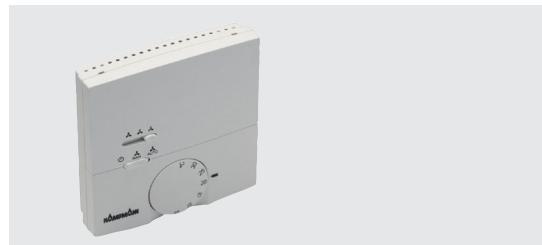

## Fans

The fan speed of the EC fans used can be continuously variably controlled by a 0-10 V DC signal. The "intelligent" motor electronics detect any possible motor malfunction and automatically switch off the fan.

## Control units

Kampmann offers extensive control accessories for operation.

**Room thermostat, type 196000030155**

Room thermostat for 3-stage speed control for surface wall-mounted installation in an attractive restrained design

### Product features:

- ▶ 2- and 4-pipe applications, thermal valve actuators 230 V AC Open/Closed, normally closed
- ▶ ABS plastic housing, functional and robust design, pure white, similar to RAL 9010, for surface-mounting on a flush back box
- ▶ Simple operation using a large dial for temperature setting with mechanical range limitation of the temperature setpoint, operating mode selector switch, Standby, Manual fan, Automatic fan, 3-stage switch for pre-selecting fan speed when operating mode selector switch is in the "Manual fan" position
- ▶ control input for heating/cooling switch-over with 2-pipe systems
- ▶ control input can either be set to Comfort/ECO or ON/OFF switch-over
- ▶ room frost protection function < 5 °C → heating valve open, fan stage 3
- ▶ optional use of the internal or external room temperature sensor (accessory)
- ▶ for use with Katherm HK, max. 5 units

**Climate controller type 196000146928**

Room temperature controller with setpoint display by means of arrow indicators in a visually understated design

### Product features:

- ▶ 2- and 4-pipe applications, setpoint display by arrow indicators, control range 13-29 degrees
- ▶ ABS plastic housing, robust design, pure white, similar to RAL 9010, surface-mounted
- ▶ control input can either be set to Comfort/ECO or ON/OFF switch-over
- ▶ unit frost protection function < 5 °C → valve(s) open
- ▶ Parallel operation of 5 units is possible
- ▶ for use with Katherm HK E, max. 5 units

## Climate Controller type 196000148941 / type 196000148942 / type 196000148943 / type 196000148944

The Climate Controller is a control unit with a high-quality glass finish

### **Product features:**

- ▶ 2- and 4-pipe - applications, thermal valve actuators  
230 V AC Open/Closed, normally closed
- ▶ 2.5" LCD display
- ▶ high-quality glass surface with capacitive keys
- ▶ LED ring acts as key feedback
- ▶ selection of the value to be displayed (room temperature, setpoint, setpoint offset)
- ▶ Automatic LED backlight
- ▶ optional use of the internal or external room temperature sensor (accessory)
- ▶ room temperature control
- ▶ parametrisable room frost protection function →  
 $RT < 8^{\circ}\text{C}$  = heating valve open, fan stage 1
- ▶ parametrisable unit frost protection function →  
 $RT < 4^{\circ}\text{C}$  = valve(s) open, fan off
- ▶ standby mode
- ▶ Eco/day switch-over
- ▶ manual or automatic mode
- ▶ functional display
- ▶ alarm display
- ▶ Timer program with 3 time channels, each with 4 switch-over points
- ▶ cleaning mode
- ▶ parametrisable language: German or English
- ▶ Modbus RTU slave interface to wire to higher-level building automation system (BAS) (only with type 148943 and type 148944)
- ▶ 3 control inputs with type 148941 and type 148942 or 2 control inputs with type 148943 and type 148944 (parametrisable functions e.g. window contact, motion detector, heating/cooling switch-over), external room sensor
- ▶ password-protected parameter level
- ▶ surface-mounted on a flush box
- ▶ pure white (type 148941 and type 148943) or black (type 148942 and type 148944)
- ▶ for use with Katherm HK, max. 4 units

### **Operating using on-site systems**

Control via analogue and digital signals is also possible as an alternative to the Kampmann control units. The following analogue and digital inputs and / or outputs are needed:

- ▶ speed control via a 0-10 VDC signal, the fan starts up safely at 1.5 V DC
- ▶ control input for the detection of a possible condensate alarm → only with electromechanical version with condensate pump
- ▶ digital signals to control the valve actuator(s) according to the actuator version
- ▶ potential-free contact for switch-over (only with Katherm HK E)

## Information on cable laying

The following points need to be taken into account with the cable laying and wiring plans stated for the electrical installation:

- ▶ Comply with the details on the type of cable and cabling, taking into consideration VDE 0100.
- ▶ Without \*: NYM-J. The requisite number of wires, including PE conductor, is stated on the cable. Cross-sections are not stated, as the cable length is involved in the calculation of the cross-section.
- ▶ With \*: J-Y(ST)Y 0.8 mm. Lay separately from high voltage lines.
- ▶ If other types of cables are used, they must be at least equivalent.

- ▶ The terminals on the unit are suitable for a maximum wire cross-section of 2.5 mm<sup>2</sup>.
- ▶ We recommend type F when using RCCBs. Refer to the provisions of DIN VDE 0100 Parts 400 and 500 when designing the rated fault current.
- ▶ The electrical data listed in the following table needs to be considered when configuring the mains supply and fuses on site.

### Electrical data for the Katherm HK 320/130, 245/160, 230 V electromechanical version (\*00)

Trench length	Fans	Nominal voltage	Mains frequency	Nominal power	Nominal current	Operating current	Ri-analogue input	IP class	Protection class
[mm]	[Quantity]	[V AC]	[Hz]	[W]	[A]	[mA]	[kΩ]		
915	1 (3600)	230	50	7	0.82	/	200	IPO0	I
1200	1 (6000)	230	50	12	0.12	/	200	IPO0	I
1700	1 (10800)	230	50	19	0.17	/	200	IPO0	I
2000	2 (6000, 6000)	230	50	23	0.24	/	100	IPO0	I
2500	2 (10800, 6000)	230	50	30	0.29	/	100	IPO0	I
3000	2 (10800, 10800)	230	50	36	0.34	/	100	IPO0	I

### Electrical data for the Katherm HK E 320/130, 230 V electromechanical version (\*00)

Trench length	Fans	Nominal voltage	Mains frequency	Nominal power	Nominal current	Operating current	Ri-analogue input	IP class	Protection class
[mm]	[Quantity]	[V AC]	[Hz]	[W]	[A]	[mA]	[kΩ]

1200	1 (630)	230	50	19	0.16	/	100	IPO0	I
1700	2 (630, 380)	230	50	29	0.22	/	50	IPO0	I
2000	2 (630, 680)	230	50	35	0.26	/	50	IPO0	I
2500	3 (630, 680, 380)	230	50	47	0.34	/	33	IPO0	I
3000	3 (730, 730, 730)	230	50	53	0.38	/	33	IPO0	I

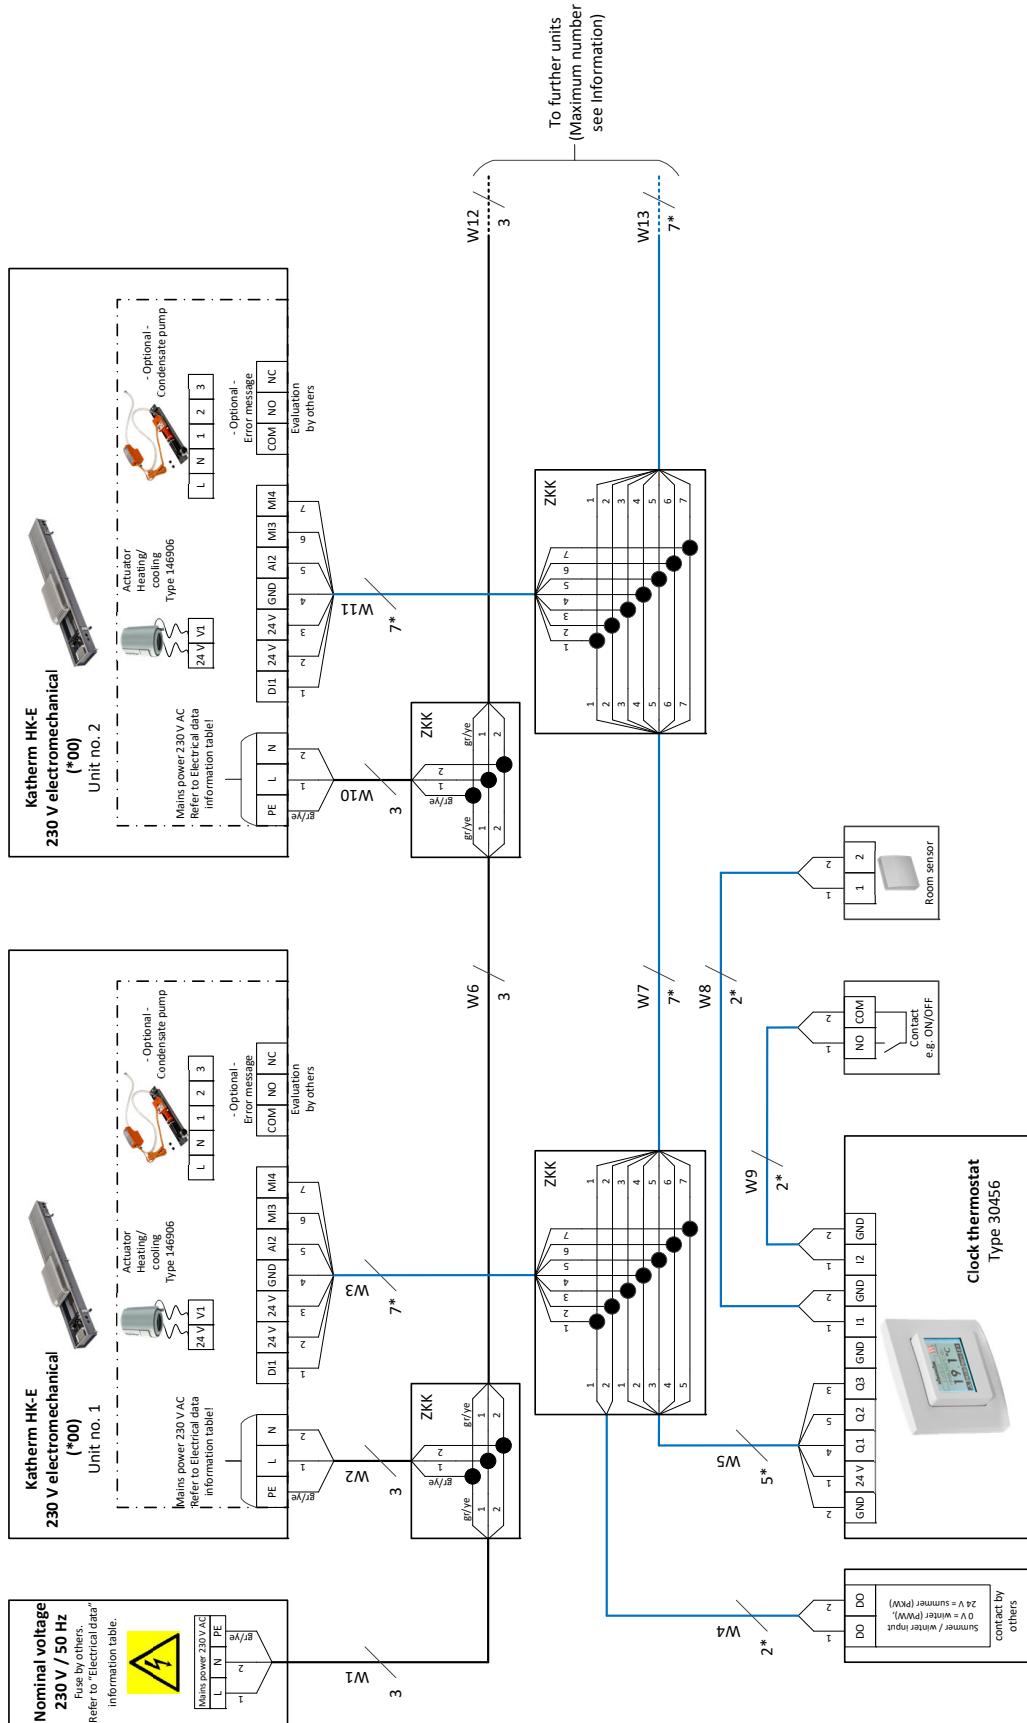

### Electrical data for the Katherm HK 360/210, 230 V electromechanical version (\*00)

Trench length	Fans	Nominal voltage	Mains frequency	Nominal power	Nominal current	Operating current	Ri-analogue input	IP class	Protection class
[mm]	[Quantity]	[V AC]	[Hz]	[W]	[A]	[mA]	[kΩ]		
950	1 (380)	230	50	12	0.11	/	100	IPO0	I
1200	1 (630)	230	50	22	0.21	/	100	IPO0	I
1350	1 (780)	230	50	27	0.26	/	100	IPO0	I
1850	2 (780, 730)	230	50	39	0.37	/	50	IPO0	I
2250	2 (780, 780)	230	50	54	0.52	/	50	IPO0	I

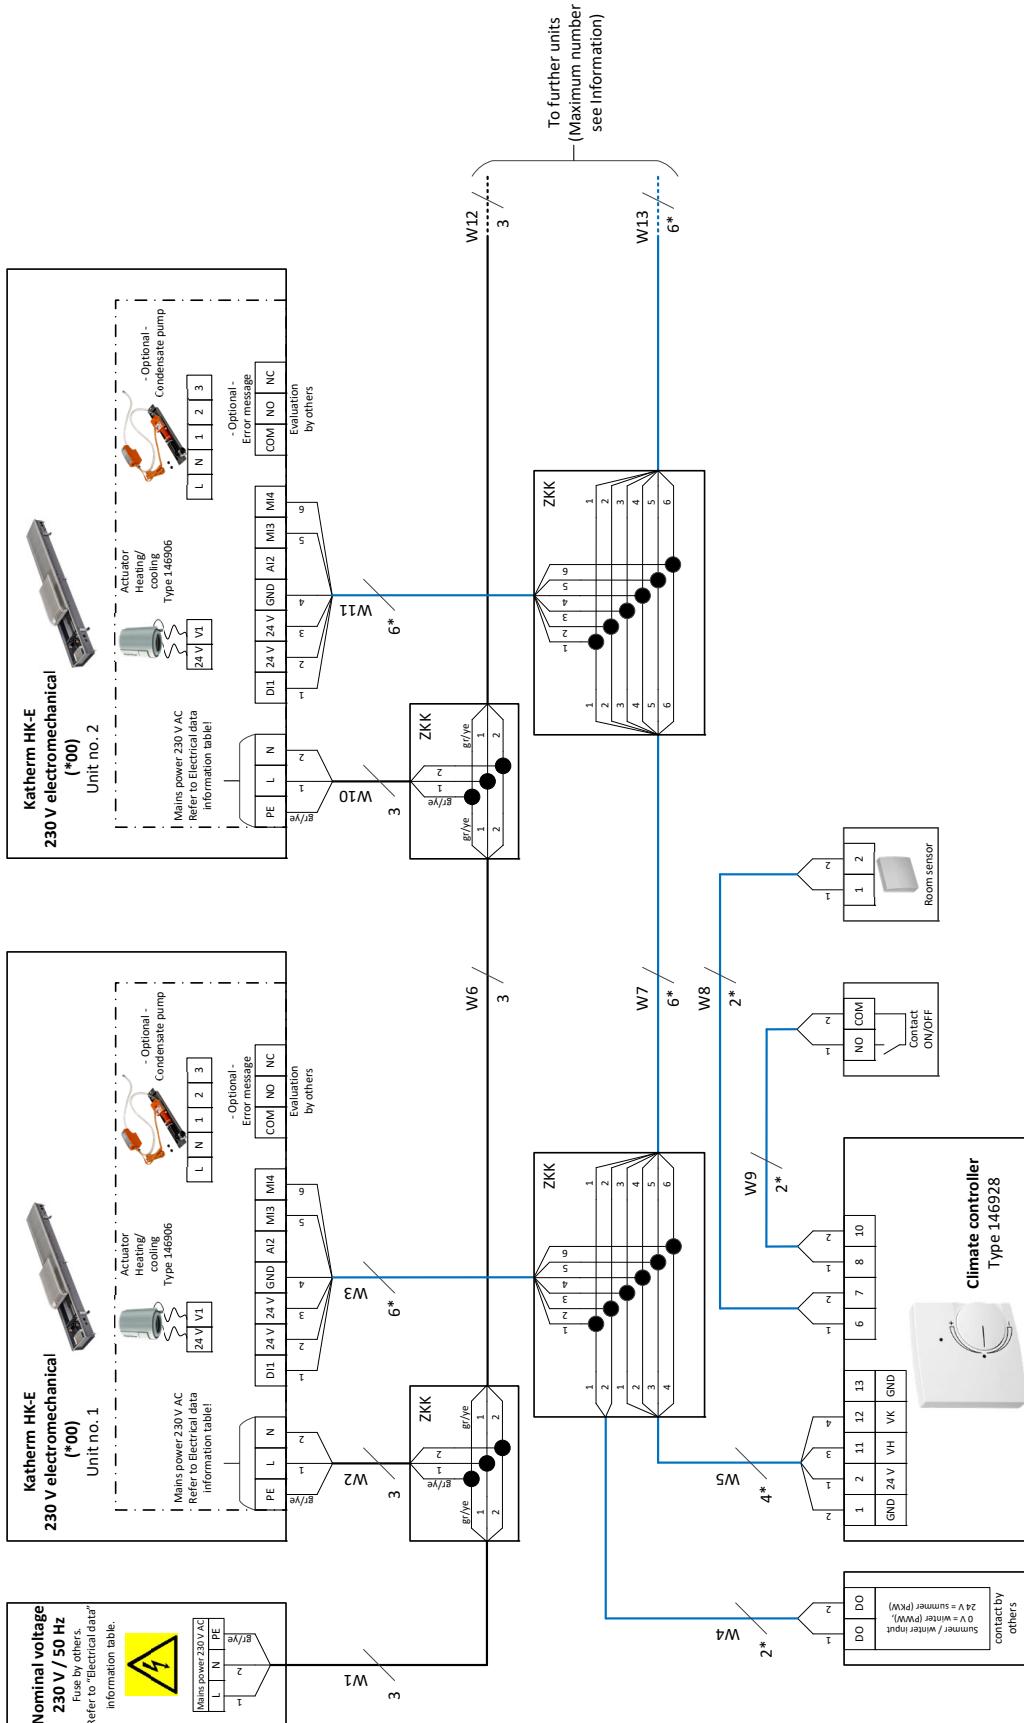

Katherm HK, 230 V electromechanical, 2- or 4-pipe, valve actuator(s) 24 V AC/DC  
Open/Closed, optional condensate pump, actuation by DDC/BMS

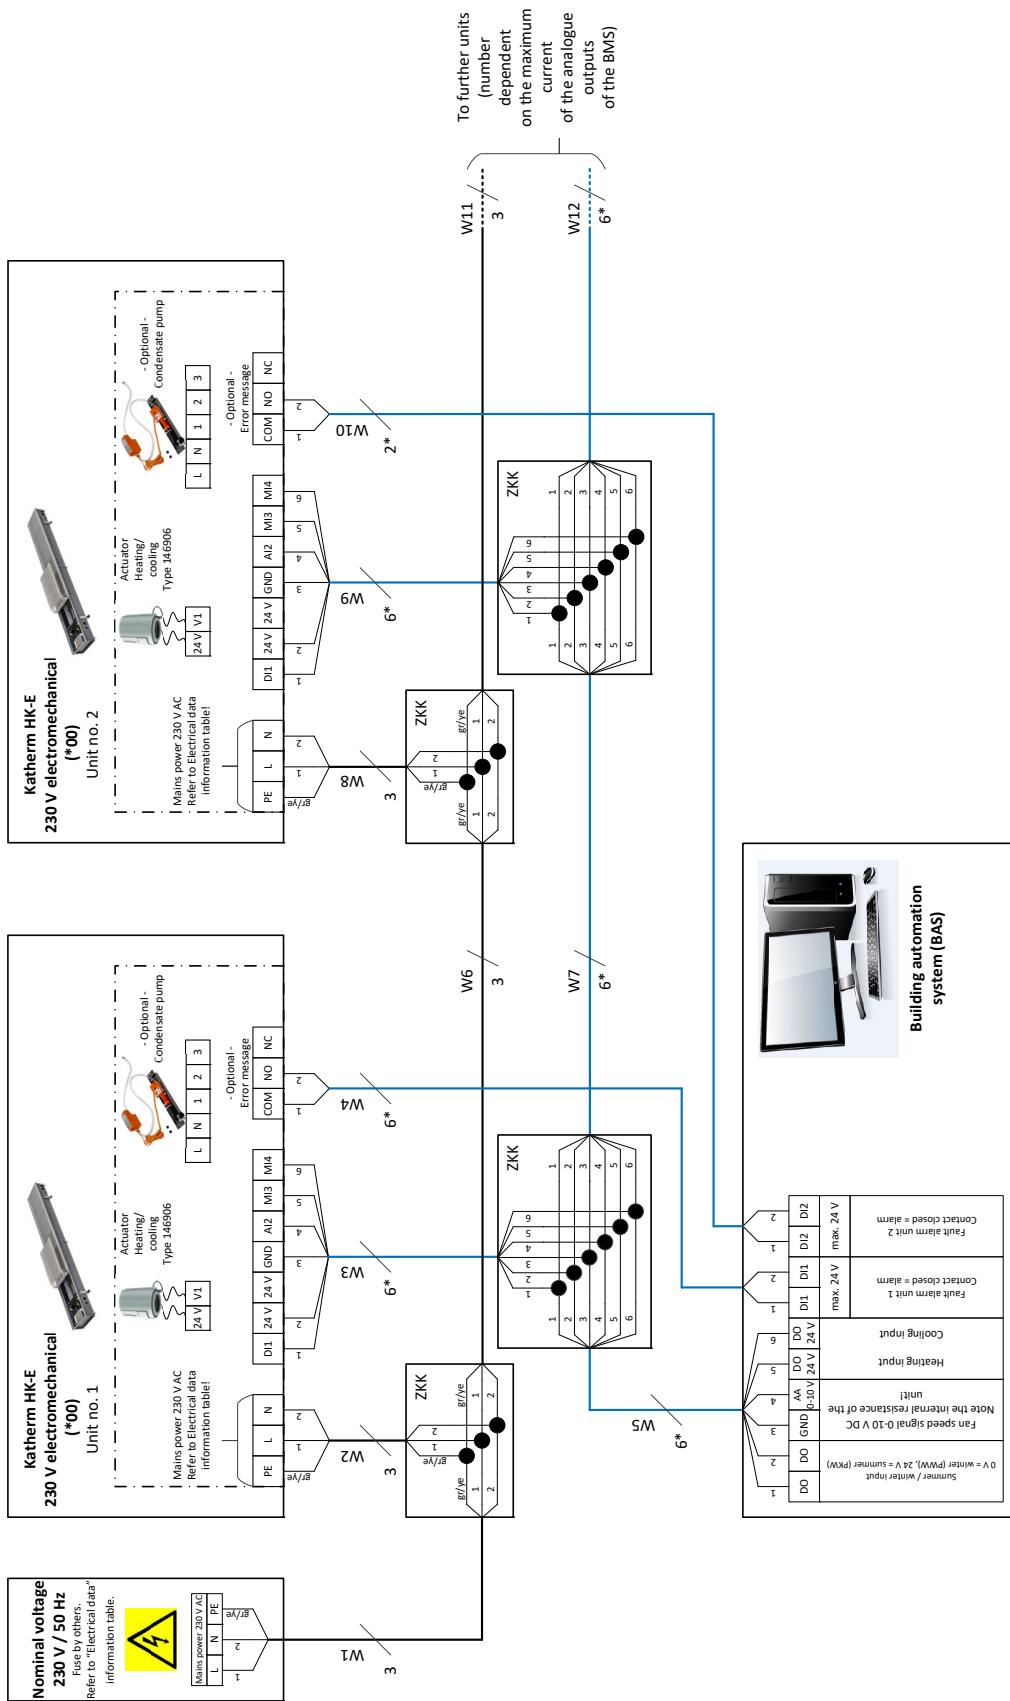

## Katherm HK, 230 V electromechanical, 2- or 4-pipe, valve actuator(s) 230 V AC Open/Closed, optional condensate pump, with Climate Controller type 14894x

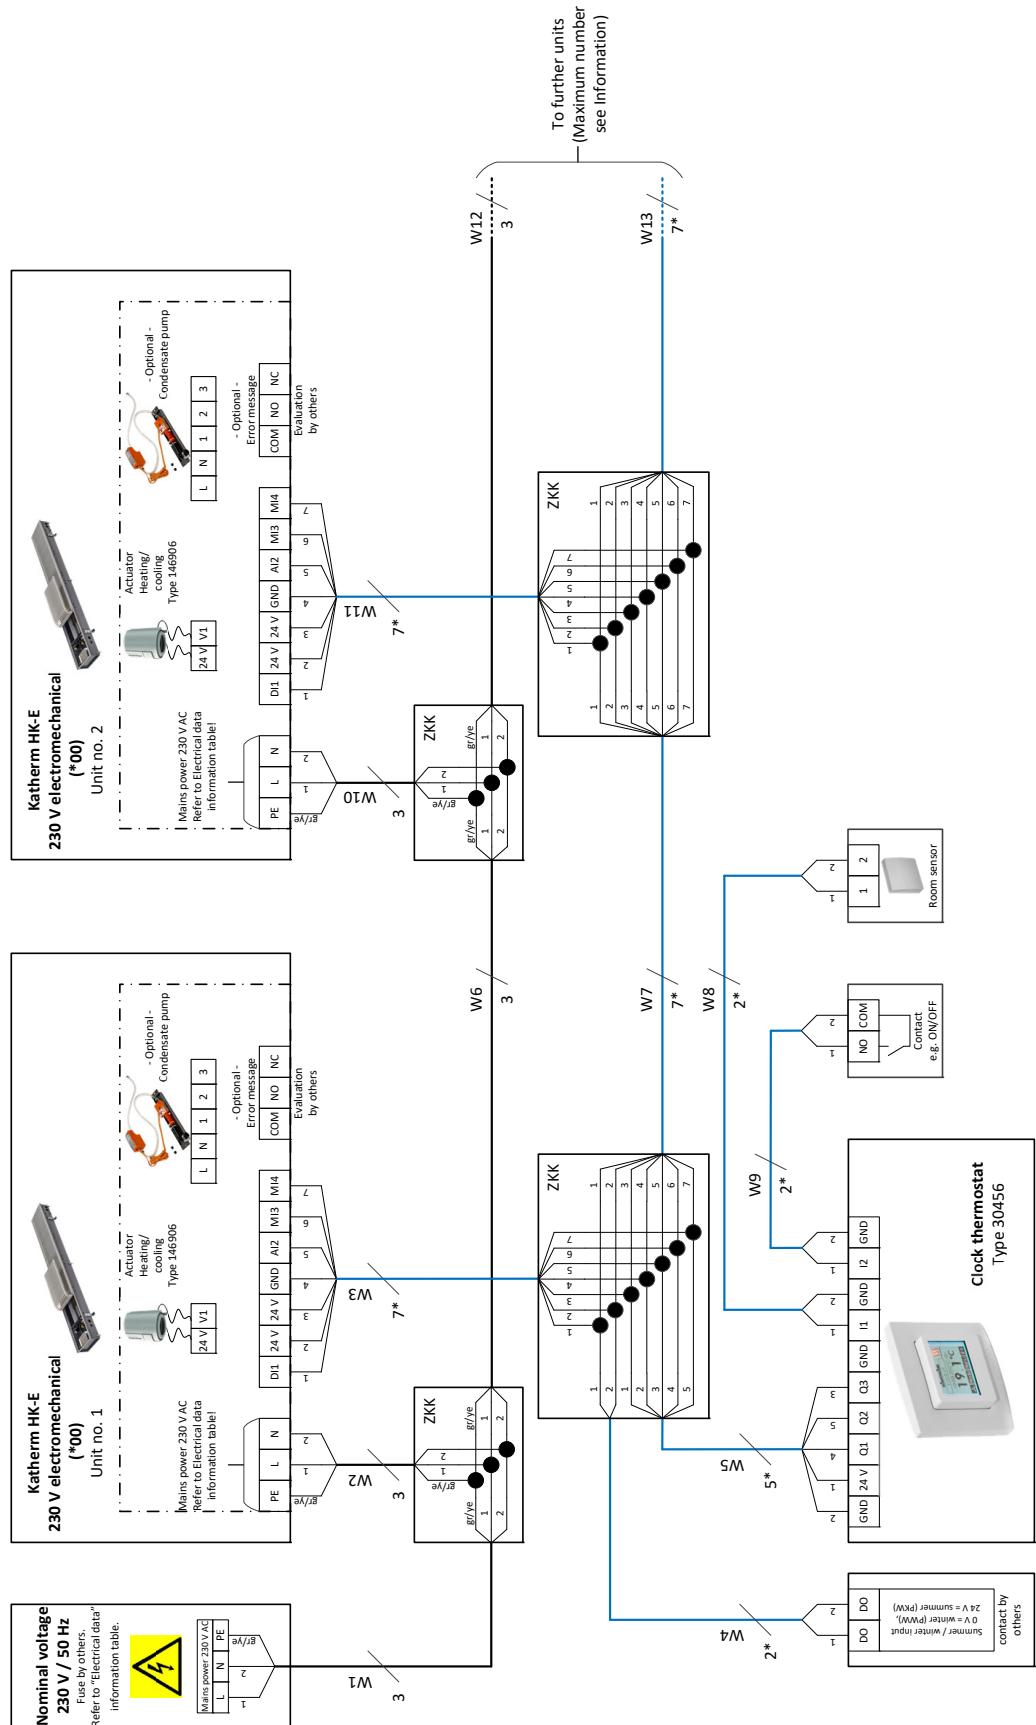

## Katherm HK, 230 V electromechanical, 2- or 4-pipe valve actuator(s) 230 V AC Open/Closed, optional condensate pump, with room thermostat type 30155

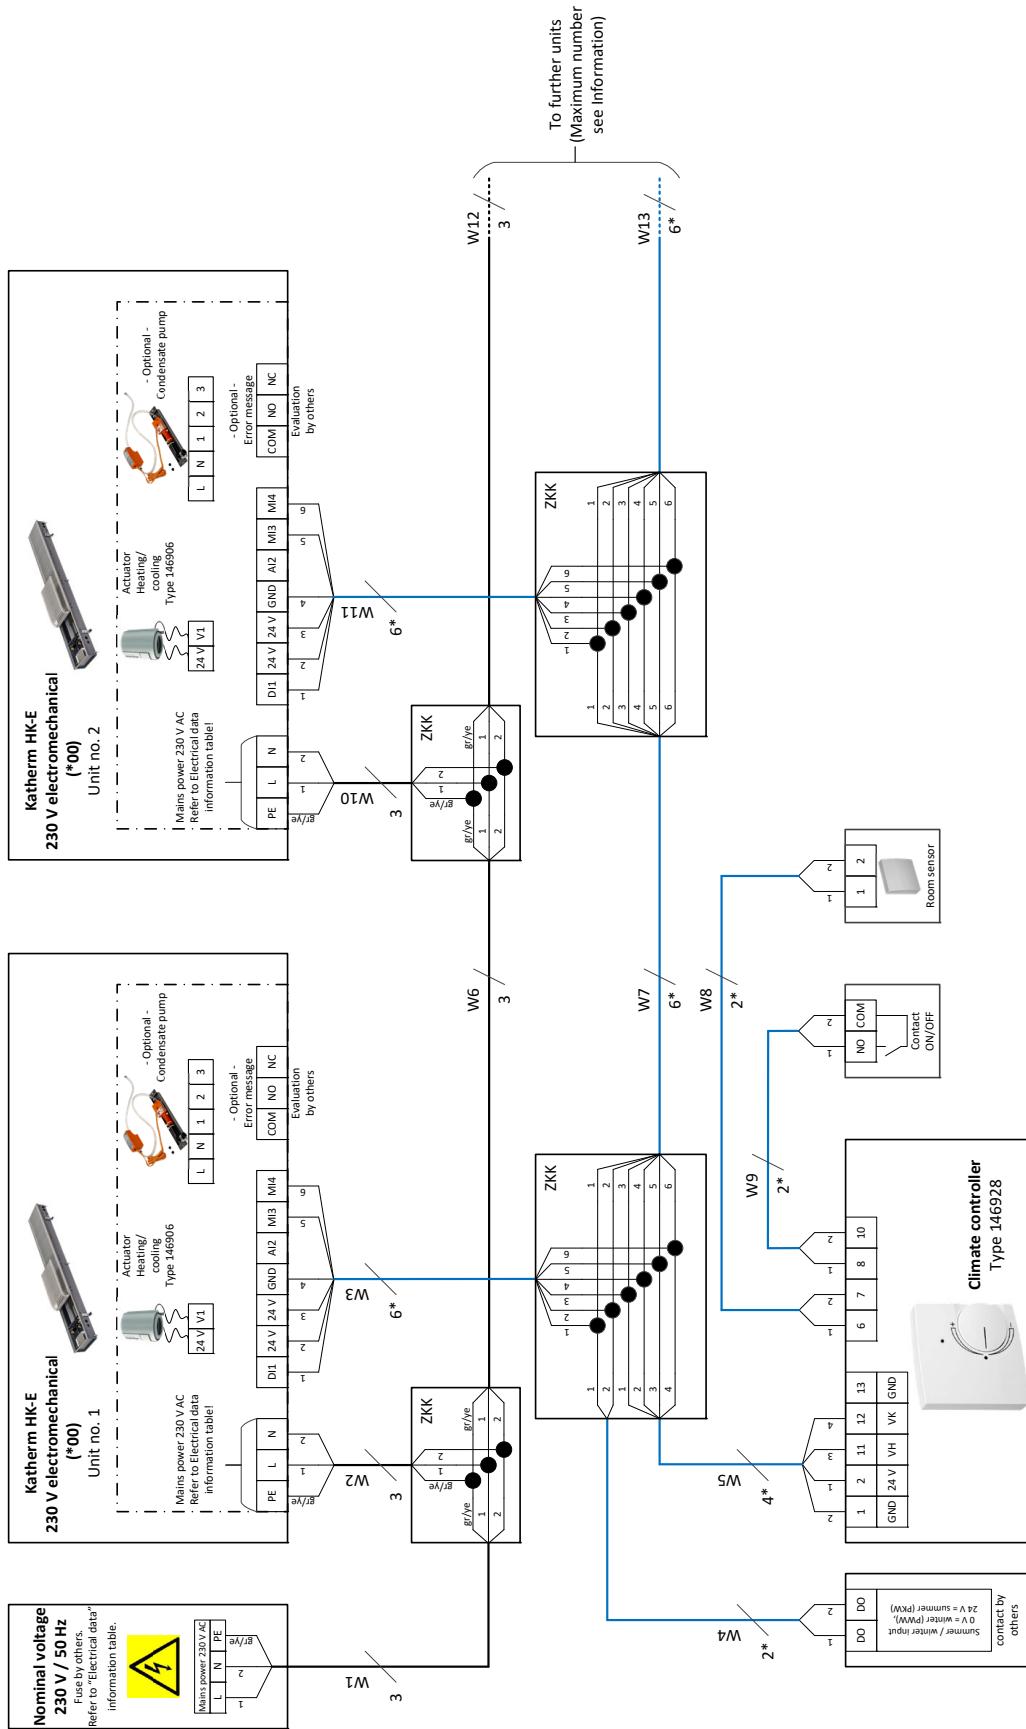

## Katherm HK-E, 230 V electromechanical, 2-pipe, electric heating element, valve actuator 24 V AC/DC Open/Closed, optional condensate pump, actuation by BA

## Katherm HK-E, 230 V electromechanical, 2-pipe, electric heating element, valve actuator 24 V AC/DC Open/Closed, optional condensate pump, clock thermostat type 30456

Katherm HK-E, 230 V electromechanical, 2-pipe, electric heating element, valve actuator  
24 V AC/DC Open/Closed, optional condensate pump, Climate Controller type 146928

# Control of Katherm HK, KaControl version

## The all-inclusive solution!

### Product features

Units configured for operation with KaControl are fully wired and fitted with all electrical parts ready for connection (with the exception of optional accessories). The built-in, high-performance, parametrisable KaControl microprocessor control provides all the functions that the Katherm HK needs. The "face" of the KaControl is the KaController control unit. A group of up to six units can be formed using a KaController control unit without the need for additional addressing. Optional plug-in interface cards offer the option of connecting to higher-level control systems.

### Fans

The fan speed of the EC fans used in the units is controlled by a 0-10 V DC signal from the KaControl. The "intelligent" motor electronics detect any possible motor malfunction and automatically switch off the fan. A motor malfunction on the unit to which the KaController is connected is displayed on the KaController.

### Control unit

Various versions of the KaController control unit are available for operation and control.

**KaController**  
Type 196003210001

Type 196003210002

Type 196003210006

The KaController offers maximum operating convenience with a large display, one-touch operation and optionally also with side function keys for quick access. Based on the principle of "as little as possible, as much as required", even untrained users can intuitively get to grips with the control options. The displays are language-independent using pictograms. The basic functions are inputted in a user-friendly way using the KaController.

### **Product features of the KaController**

- ▶ plastic housing, colour similar to RAL 9010 (type 196003210001 and 196003210002) or black (type 196003210006) for surface-mounting on a flush back box or surface-mounting with a surface-mounted frame (accessory)
- ▶ high-quality design of room control units, large PCD multifunctional display with energy-saving, automatically switching LED backlight
- ▶ push-turn navigator dial with endless turn/lock function
- ▶ side function keys for quick access (only with type 196003210002)
- ▶ integral temperature sensor
- ▶ individually adjustable basic display
- ▶ display of fault messages
- ▶ built-in weekly switching program
- ▶ password-protected parameter level

- ▶ 24 V DC/max 0.5 A switch output parametrisable to unit alarm, heat or cooling demand (only with 2-pipe applications)
- ▶ sequential control of the valve (Open/Closed) and fan speed via one (2-pipe) or two data points 0-10 V DC (4-pipe) → only with control without KaController
- ▶ one slot for optional interface cards for connection to a higher-level building automation system → optionally Modbus, KNX, BACnet (accessory)
- ▶ password-protected parameter level
- ▶ parallel operation of a maximum of 6 units is possible, extendible to a maximum of 30 units using additional CANbus cards type 3260701 (accessory) per unit

Any additional functions required can be parametrised and correspondingly coordinated.

### **KaControl control function**

The parametrisable KaControl microprocessor control offers a wealth of functions. The following factory settings are set for the Venkon product:

- ▶ 2- and 4-pipe - applications, thermal valve actuators 24 V DC Open/Closed, normally closed
- ▶ room temperature control with 2-point valve control and demand-led fan control in automatic operation or optionally fixed stage selection
- ▶ room frost protection function → RT < 8 °C = heating valve open, fan stage 1
- ▶ unit frost protection function → RT < 4° = valve(s), fan off
- ▶ optional use of the internal or external room temperature sensor (accessory)
- ▶ in the event of an alarm being triggered on a device to which the KaController room control unit is connected, e.g. a motor malfunction or condensate alarm is detected by the KaControl and indicated on the KaController control unit
- ▶ control input for heating/cooling switch-over with 2-pipe systems
- ▶ control input can either be set to Comfort/ECO or ON/OFF switch-over

## Information on cable laying

The following points need to be taken into account with the cable laying and wiring diagrams for the electrical installation:

- ▶ Comply with the details on the type of cable and cabling, taking into consideration DE 0100.
- ▶ Without \*: NYM-J. The requisite number of wires, including PE conductor, is stated on the cable. Cross-sections are not stated, as the cable length is involved in the calculation of the cross-section.
- ▶ With \*: J-Y(ST)Y 0.8 mm. Lay separately from high voltage lines.
- ▶ With \*\*: UNITRONIC BUS LD 0.22 mm<sup>2</sup>. Lay separately from high voltage lines.
- ▶ If other types of cables are used, they must be at least equivalent.
- ▶ Length of the BUS line from the KaController to unit 1: max. 30 m.
- ▶ Maximum number of parallel units: 6 units. CANbus cards type 3260701 needed for each unit (see accessories) maximum 30 no.
- ▶ Length of Bus line from unit 1 to the last unit max. 30 m. The cable length can be increased to 500 m using CANbus cards type 3260701 (see accessories).
- ▶ The terminals on the unit for the mains power supply are suitable for a maximum wire cross-section of 2.5 mm<sup>2</sup>.
- ▶ We recommend type F when using RCCBs. Refer to the provisions of DIN VDE 0100 Parts 400 and 500 when designing the rated fault current.
- ▶ The electrical data listed in the following table needs to be considered when configuring the on-site mains power supply and fuses.

**Electrical data for Katherm HK 320/130, 245/160, KaControl version (\*C1)**

Trench length	Fans	Nominal voltage	Mains frequency	Nominal power	Nominal current	Operating current	Ri-analogue input	IP class	Protection class

Katherm HK, KaControl C1, 2- or 4-pipe, valve actuator(s) 24 V DC Open/Closed, optional condensate pump, actuation 0-10 V DC via BA

## Katherm HK, KaControl C1, 2- or 4-pipe, valve actuator(s) 24 V DC Open/Closed, optional condensate pump, with KaController type 321000x

## Katherm HK-E with KaControl, 2-pipe, electric heating element, valve actuator 24 V/DC Open/Closed, optional condensate pump, actuation by KaController

# KaControl – Integration into intelligent building networks (IoT)

KaControl offers a wealth of options for integration into established communication networks. Various building automation strategies can be configured using different options.

## Individual switching of units

Units with KaControl configuration can be directly integrated into on-site networks using optional communication interfaces. Control and monitoring is provided by fixed data points. Operation is provided by the KaController or by the control units belonging to the network.

## Switching of groups

Up to six units with KaControl configuration can be operated in a single group. Groups of units can be directly integrated into on-site networks using optional communication interfaces. Control and monitoring is provided by fixed data points. Operation of a group is provided by the KaController or by control units belonging to the network.

## Communication interfaces

The following communication interfaces can be supplied separately or factory-fitted.

- ▶ Modbus RTU
- ▶ KNX

## Note:

More information on integration into intelligent building networks and the associated communication interfaces is available on request!

## KaControl – system controller

The optional Modbus interface allows units with KaControl configuration to be networked into systems individually or into groups with factory-programmed higher-level Kampmann system controllers.

### KaControl SEL control panel 4.0

- ▶ for the monitoring and control of up to 60 Kampmann secondary air units, split into up to 25 groups (zones), maximum 6 units per groups
- ▶ central and zone-wide heating/cooling switch-over
- ▶ own timer program per zone/room
- ▶ integrated web server
- ▶ optional BACnet licence is available

### KaControl AUL control panel

- ▶ one Kampmann ventilation system
- ▶ up to 60 secondary air units or door air curtains split into up to 10 groups (zones), identical units required within a group, up to 6 units per group
- ▶ optional: KaController control unit for each group
- ▶ central heating (winter)/cooling (summer) switch-over of secondary air units or heating (winter)/ventilation (summer)
- ▶ 5 timer programs can be assigned to groups
- ▶ optional: BACnet IP gateway for connection to higher-level control systems for the units/zones

### KaControl visualisation

- ▶ up to 100/300 units
- ▶ optional: KaController control unit for each group
- ▶ central heating (winter)/cooling (summer) switch-over of secondary air units or heating (winter)/ventilation (summer) of door air curtains
- ▶ central timer programs
- ▶ visualisation of Kampmann secondary air units, door air curtains and ventilation systems

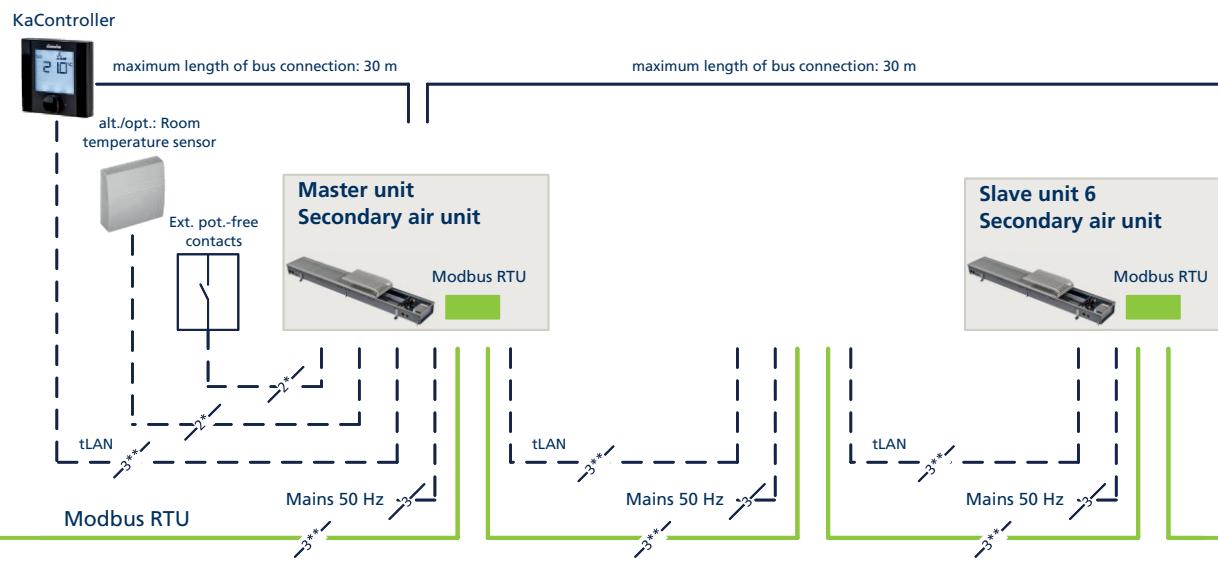

#### Note:

More information on KaControl system controllers can be provided on request!

## Accessories

Article	Article	Properties	Dimensions [mm]	Suitable for	Article no.
	Return shut-off valve	Straight, Connection 1/2"	80 x 60 x 100	Katherm NK, Katherm QK or Katherm HK	<b>194000145952</b>
	Return shut-off valve	Angled, Connection 1/2"	22 x 50 x 73	Katherm HK	<b>194000145953</b>
	Return shut-off valve	straight, Connection 1/2"	62 x 35 x 95	Katherm HK, for higher flow from 250 l/h	<b>194000145954</b>
	Return shut-off valve	angled, Connection 1/2"	33 x 74 x 71	Katherm HK, for higher flow from 250 l/h	<b>194000145955</b>

### Valve actuators

	Thermoelectric actuator	230 V AC	39 x 39 x 67	room thermostat type 30155 and climate controller type 14894x, Katherm NK	<b>194000146905</b>
		24 V AC/DC	64 x 40 x 79	Katherm, control configuration KaControl -C1 and clock thermostat type 30456, Katherm QK or Katherm HK 320 E	<b>194000146906</b>
